The Northeast Held the Virus in Check. Now Cases Are Inching Up Again.

The Northeast, devastated by the coronavirus in the spring and held up as a model of infection control by summer, is now seeing early signs of a second wave.

COVID-19 DATA SUMMARY

Data Snapshot

STATE REOPENING METRICS

METRICS As of October 6, 2020, 1 PM	REPORTING DATE	RATE	% DIFF VS LAST WEEK	LAST WEEK REPORTING DATE	LAST WEEK RATE
New COVID-19 positive cases per 100K	10/6	9.4	+5.6%	9/29	8.9
Adjusted case rate for tier assignment	10/6	7.4	+1.4%	9/29	7.3
Positivity Rate	10/6	2.8%	-0.1% *(% Point Difference)*	9/29	2.9%
Health Equity Metric* (starting 10/6)	10/6	4.4%	N/A	N/A	N/A

Explanation of metrics from the California Department of Public Health

New COVID-19 positive cases per 100K
7-Day average new positive cases per 100K residents with a 7-day lag

Case rate will be determined using confirmed (by PCR) cases, and will not include state and federal inmate cases. Case rates include an adjustment factor for counties that are testing above the state average. The incidence is adjusted downwards in a graduated fashion, with a maximum adjustment at twice the State average testing rate.

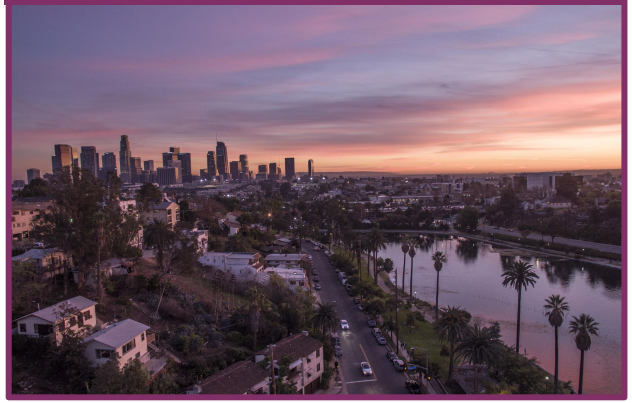
Positivity Rate
7-day average of positive lab- confirmed COVID-19 cases divided by total tests with conclusive results with a 7-day lag.

Health Equity Metric
On 10/6, the State began to include a third metric to measure health equity. This metric is defined as the test positivity rate in the Lowest Healthy Places Index Quartile Census Tracts (7-day, 7-day lag)

Source: California Department of Public Health

County risk level	New cases	positive tests
WIDESPREAD Many non-essential indoor business operations are closed	More than 7 daily new cases (per 100k)	More than 8% positive tests
SUBSTANTIAL Some non-essential indoor business operations are closed	4 - 7 daily new cases (per 100k)	5 - 8% positive tests
MODERATE Some indoor business operations are open with modifications	1 - 3.9 daily new cases (per 100k)	2 - 4.9% positive tests
MINIMAL Most indoor business operations are open with modifications	Less than 1 daily new cases (per 100k)	Less than 2% positive tests

CURRENT LOS ANGELES COUNTY RISK LEVEL: ***WIDESPREAD***



LOS ANGELES COUNTY KEY METRICS

Key Takeaways:
The following metrics have seen **undesirable** movement over the past seven days for which data are available: **New Cases, New Hospitalizations** (vs last week), **Acute Care Bed Capacity** (vs baseline), **ICU Bed Capacity** (vs baseline), **LA City Crime** (vs last week), and **Unemployment Insurance Claims** (vs baseline)

The following metrics have seen **desirable** movement over the past seven days: **New Deaths, COVID Positive Test Rate**, **New Hospitalizations** (vs baseline), **Acute Care Bed Capacity** (vs last week), **ICU Bed Capacity** (vs last week), **LA City Crime** (vs baseline), and **Unemployment Insurance Claims** (vs last week)

**Unless otherwise noted, the baseline period is the week of 4/18/20-4/24/20, our highest week in the month of April, first full month of reporting on record*
**As of October 8, 2020

COVID-19 DATA SUMMARY

United States Update

COVID-19 US Cases - Per Capita State Comparisons

As of October 9, 2020, 3:00 PM

California has the most cases and the Midwest remains an epicenter. Recent increases have been concentrated in the midwest. The top five states, based on total cases, include:

#1: 838.6K cases in **California (+3.8K) - 2119** per 100K
16.4K deaths in **California (+67) - 41.5** per 100K

#2: 785.8K cases in **Texas (+4.0K) - 2737** per 100K
16.4K deaths in **Texas (+98) - 57.3** per 100K

#3: 728.9K cases in **Florida (+2.9K) - 3422** per 100K
15.4K deaths in **Florida (+118) - 72.2** per 100K

#4: 471.7K cases in **New York State (+1.6K) - 2413** per 100K
25.6K deaths in **New York State (+6) - 130.8** per 100K

#5: 329.0K cases in **Georgia (+1.6K) - 3127** per 100K
7.3K deaths in **Georgia (+54) - 69.9** per 100K

Rounding out the top ten are:
Illinois, North Carolina, Arizona, New Jersey, Tennessee

California ranks ...
#1 in Cases
#30 in Cases per 100K

#2 in Deaths
#26 in Deaths per 100K

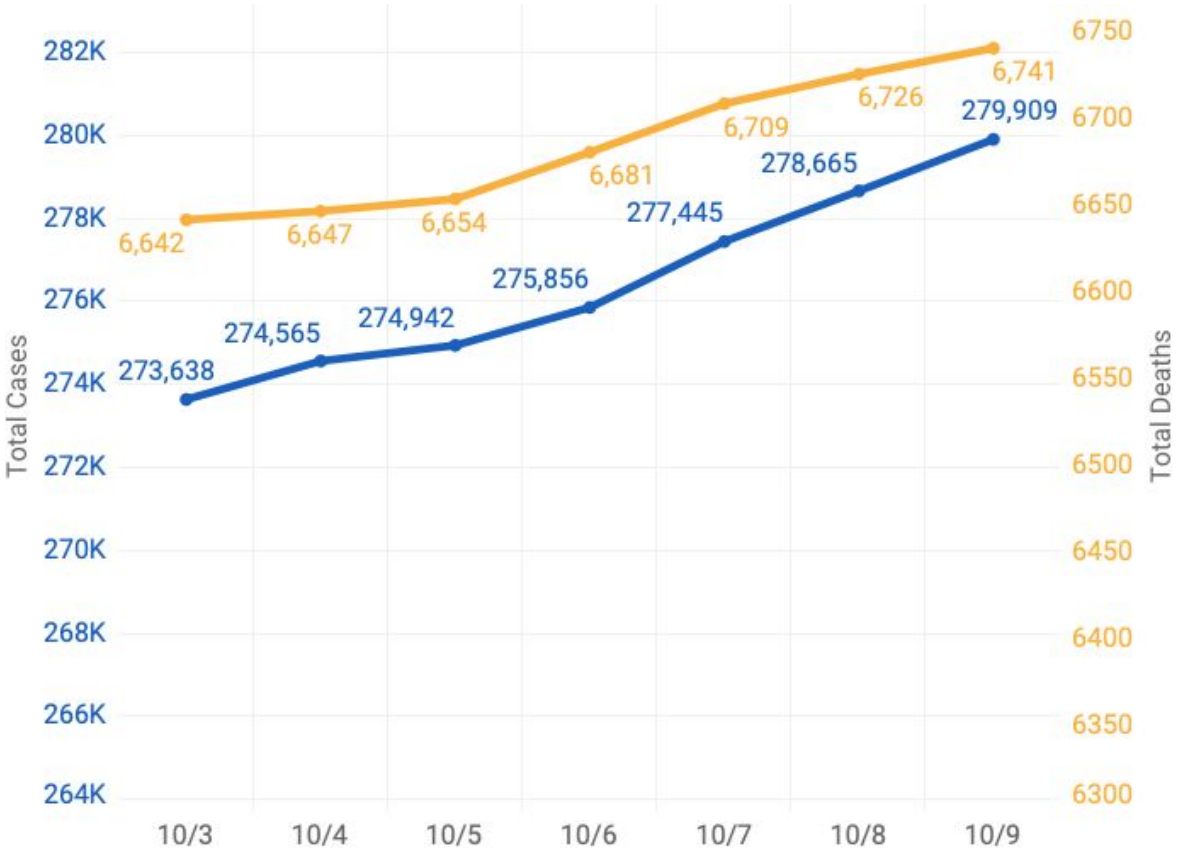
COVID-19 DATA SUMMARY

LA County Update

COVID-19 Los Angeles County Total Cases and Total Deaths, Past 7 Days

As of October 9, 2020, Noon

Key Takeaways:
Los Angeles County currently has a **2.4% mortality rate**. The estimated infection rate is 0.99 (*ideal is <1.0)*



Total Cases
Total Deaths

Source: Los Angeles County Department of Health, COVID Tracking Project

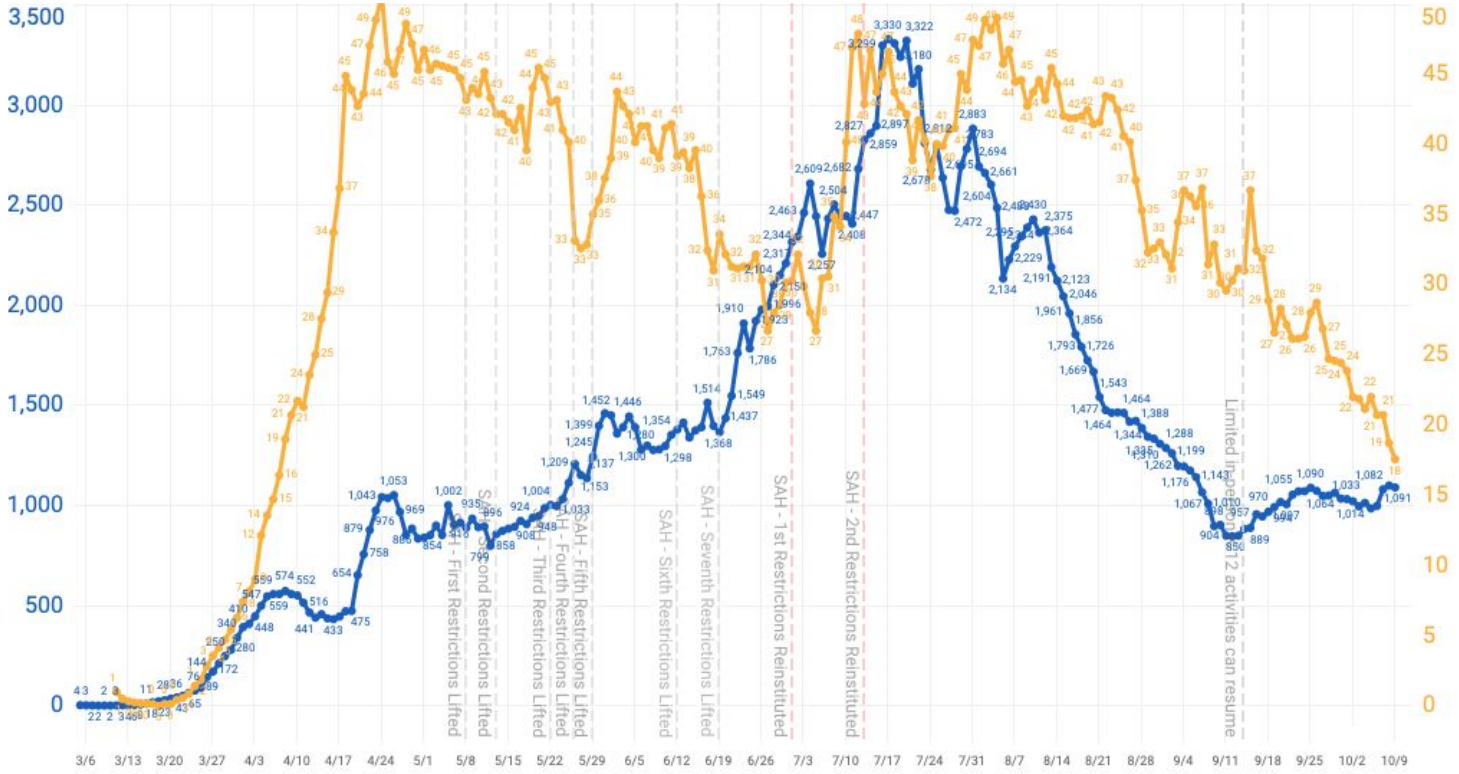
COVID-19 Los Angeles County New Cases and New Deaths, 7-Day Average

As of October 9, 2020, Noon

Key Takeaways:

The past seven days have seen an average daily increase of 1,091 new cases

The past seven days have seen an average daily increase of 18 new deaths



Source: Los Angeles County Department of Health

Note: Between July 3-5, the County took their systems offline for an upgrade. Additionally, several testing sites were closed and at least one major lab did not report case results. Deaths were likely undercounted because the necessary verification steps extended beyond the weekend due to holiday. As a result, all data during this time period is skewed.

COVID Cases and Death Demographics*

As of October 7, 2020 • Two-day lag

Key Takeaways:

• Data is incomplete with 36.2% of cases and 0.2% of deaths still under investigation

• People aged 18-29 and 30-49, and Hispanic/Latino Americans are overrepresented in cases

• Seniors, Men, Hispanic/Latino, and Black Americans overrepresented in deaths

• 6,250 out of 6,726 deaths had comorbidities (underlying conditions) (92.9%)

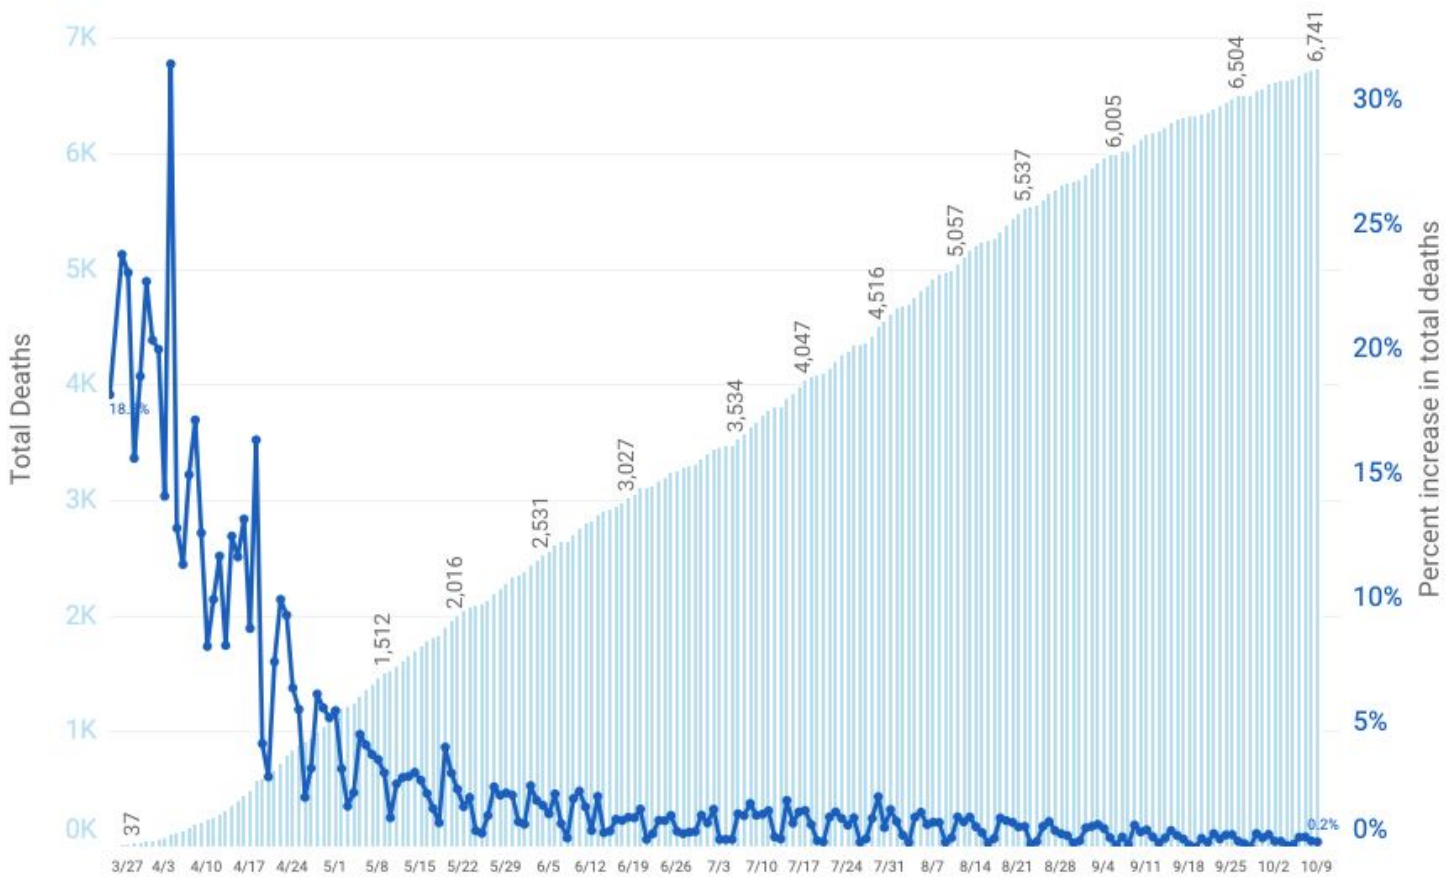
COVID-19 Los Angeles County Total Death Increase

As of October 9, 2020, Updated 1:00 PM

Key Takeaways:
Yesterday saw a death increase of 0.2%

The past 7 days have seen an **average daily death increase of 0.2%**



Source: Los Angeles County Department of Health

Note: Between July 3-5, the County took their systems offline for an upgrade. Additionally, several testing sites were closed and at least one major lab did not report case results. Deaths were likely undercounted because the necessary verification steps extended beyond the weekend due to holiday. As a result, all data during this time period is skewed.

COVID-19 • LOS ANGELES COUNTY

Testing

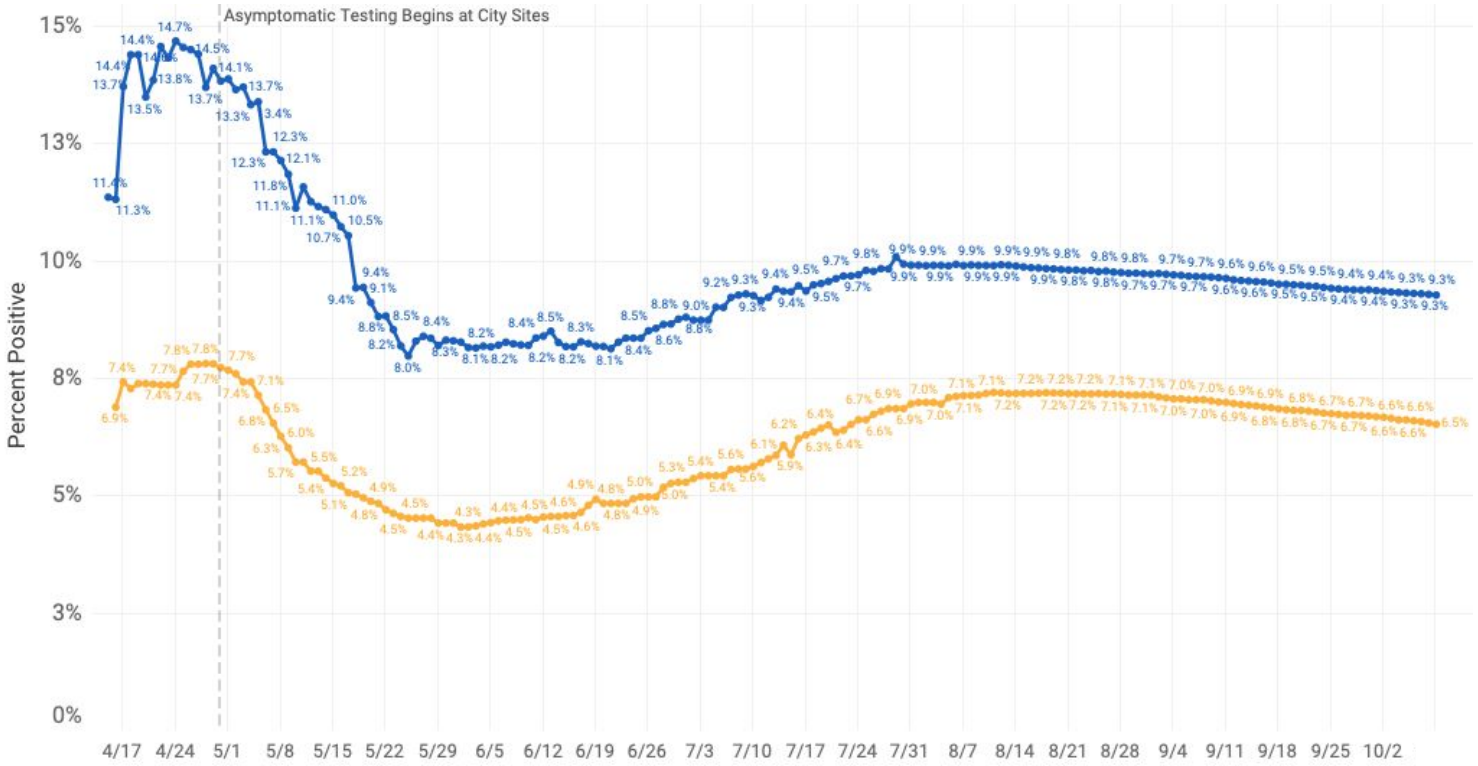
Positive Test Rate - Los Angeles City vs County

As of October 8, 2020 • One-day lag

Key Takeaways:

LA County's overall positive rate is currently at 9.3% *(for individuals tested)*

LA City's overall positive rate is currently at 6.5% *(for all tests)*



Source: Los Angeles County Department of Public Health. Recent dates are incomplete due to lags in reporting.
Persons Tested are derived from Electronic Lab Reporting (ELR) data. Positive Persons will not equal total cases because not all laboratories report results through ELR.

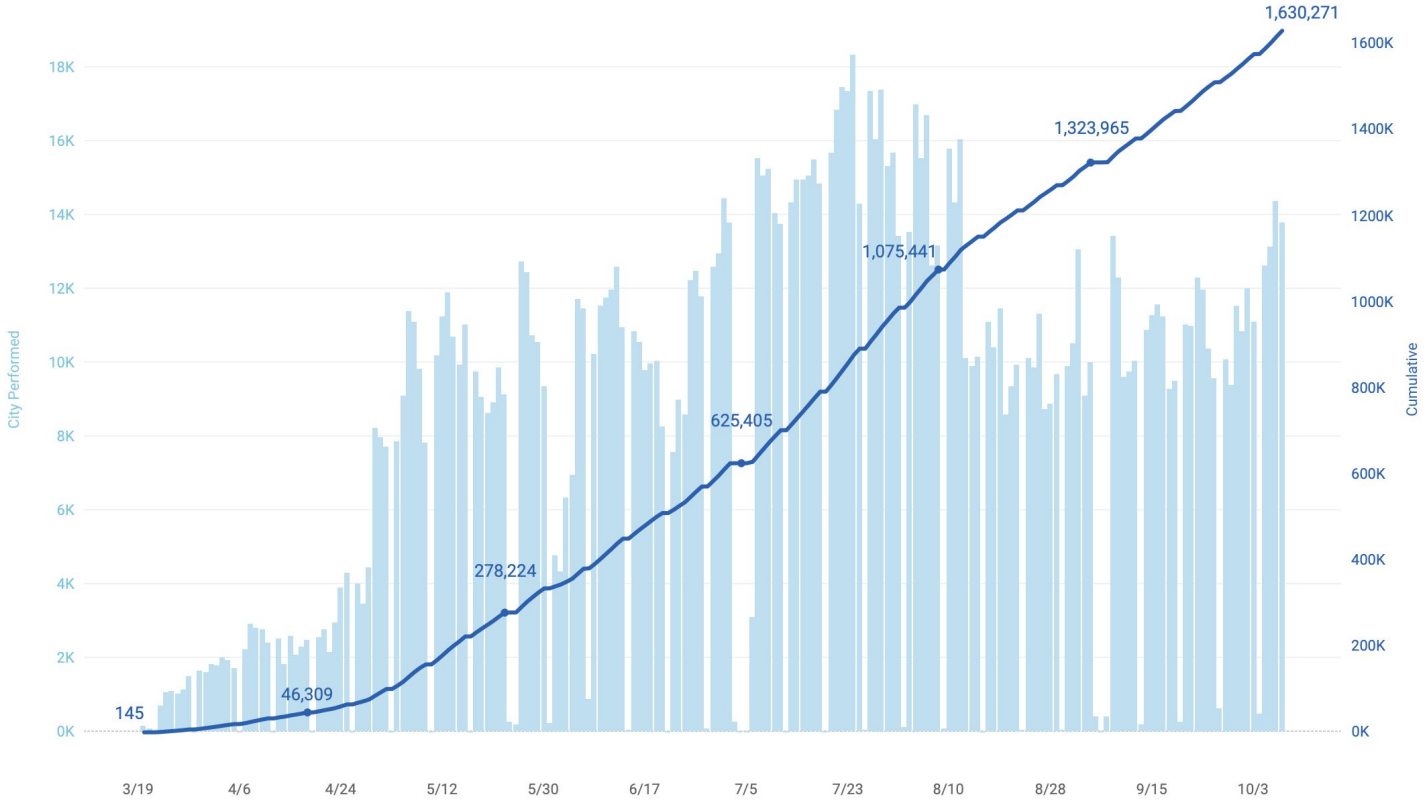
City of Los Angeles* Tests Conducted

As of October 8, 2020 • One-day lag

Key Takeaways:

- **At least 1,630,271** tests have been performed at City of Los Angeles since 3/20
- In LA County overall, at least **2,786,071 people** have been tested since 3/20
- **At least 13,790** tests were performed on 10/8
- On average, **12,832** tests were performed each day from 10/2 to 10/8
- **103,470** of the 1,610,386 test for which results were received were positive (6.6%)

Note: *Several testing sites were closed over the July 4th holiday weekend*



Source: City of Los Angeles
*Public test registration. It does not include registration of critical city employees, first responders, and health care providers.

Prepared by Mayor's Innovation Team

City of Los Angeles* Tests vs Positive Rate

As of October 8, 2020 • One-day lag (for cumulative)/Two-day lag (for 7-day)

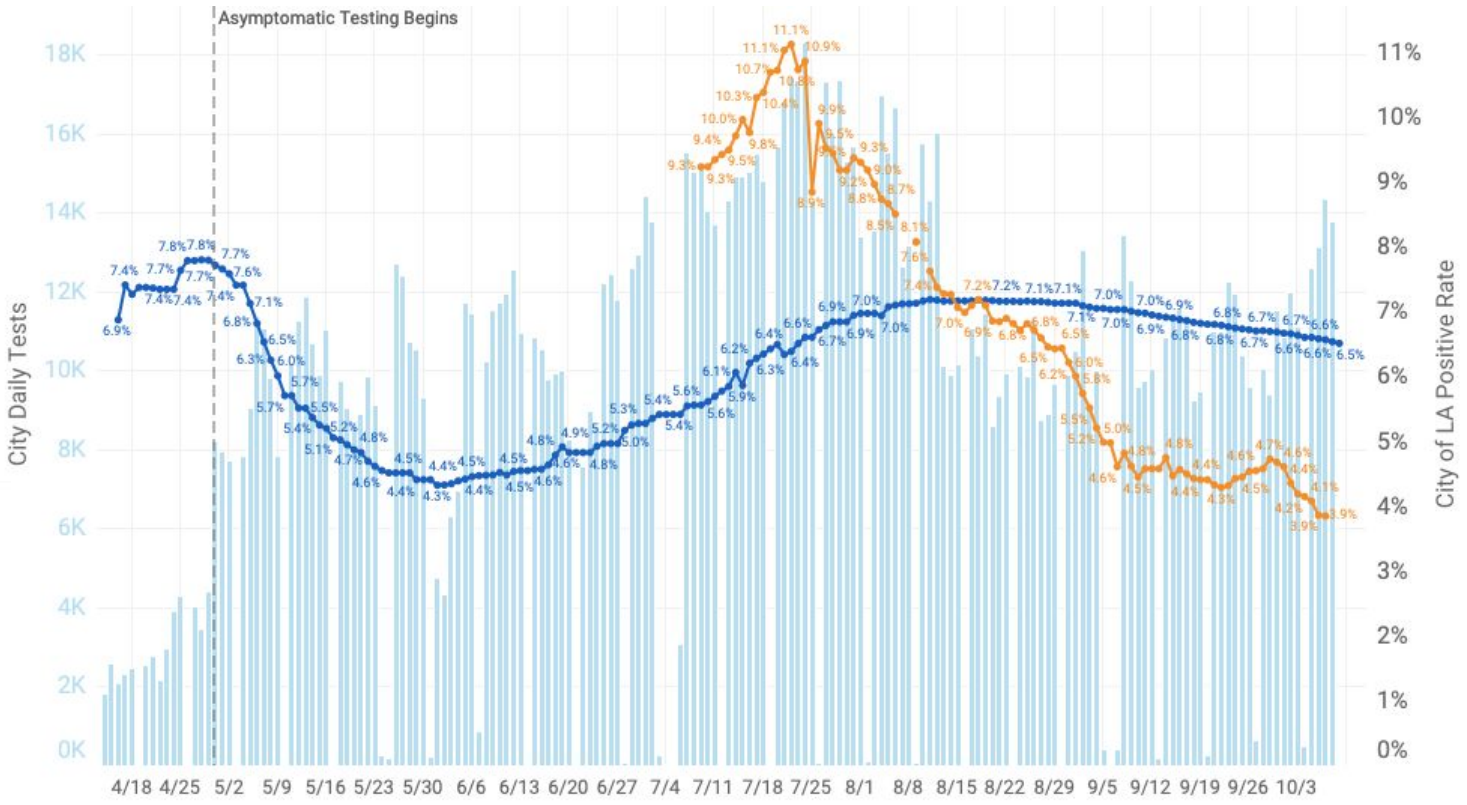
Key Takeaways:

• The overall positive testing rate for City of LA sites peaked on 4/27 with a rate of 7.8%

• The overall positive testing reached its lowest rate of 4.3% on 5/31

• The current positive rate is declining slightly is currently at 6.5%

• The 7-day positivity rate is declining and is now 3.9% (as of 10/7)



Source: City of Los Angeles
*Public test registration. It does not include registration of critical city employees, first responders, and health care providers. These testing numbers only include sites within the City of Los Angeles boundaries.

County of Los Angeles People Tested vs Positive Rate (for people tested by test day)

As of October 8, 2020 • One-day lag

Key Takeaways:

• The overall positive rate for Los Angeles County peaked on 4/8 with a rate of 13.4%

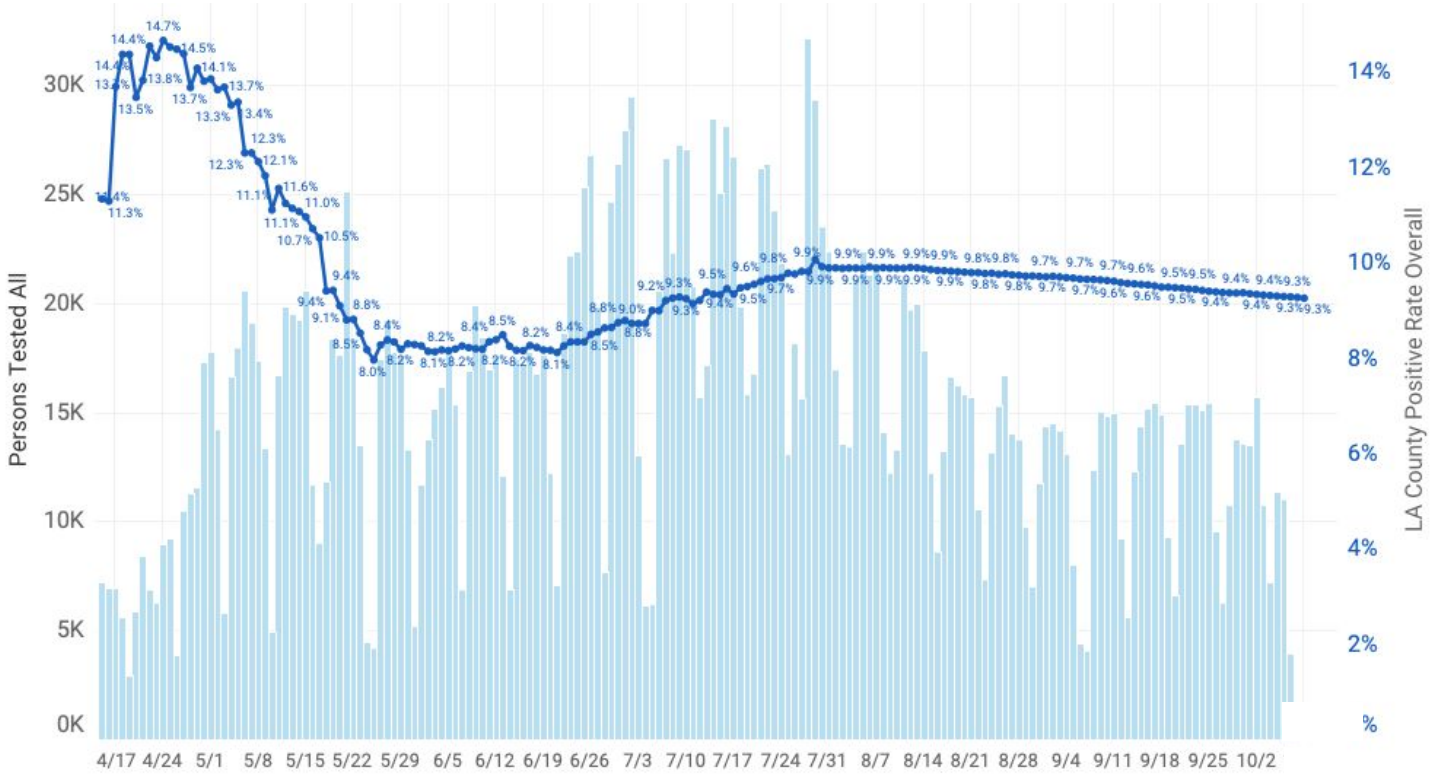
• The positive testing reached its lowest rate of 7.7% on 5/27

• The overall cumulative % positive persons tested as of 10/8 is 9.3%

• The overall cumulative % positive specimens as of 10/8 is 7.2%

• The 7-day average daily % positive persons as of 10/8 is 7.8%

• The 7-day average daily % positive specimens as of 10/8 is 3.1%



Source: Los Angeles County Department of Public Health. Recent dates are incomplete due to lags in reporting.
Persons Tested are derived from Electronic Lab Reporting (ELR) data. Positive Persons will not equal total cases because not all laboratories report results through ELR.

Prepared by Mayor's Innovation Team

County of Los Angeles People Tested Daily vs Overall Positivity Rate vs. Seven-Day Average Positivity Rate (People) As of October 2, 2020 • One-week lag

Key Takeaways:

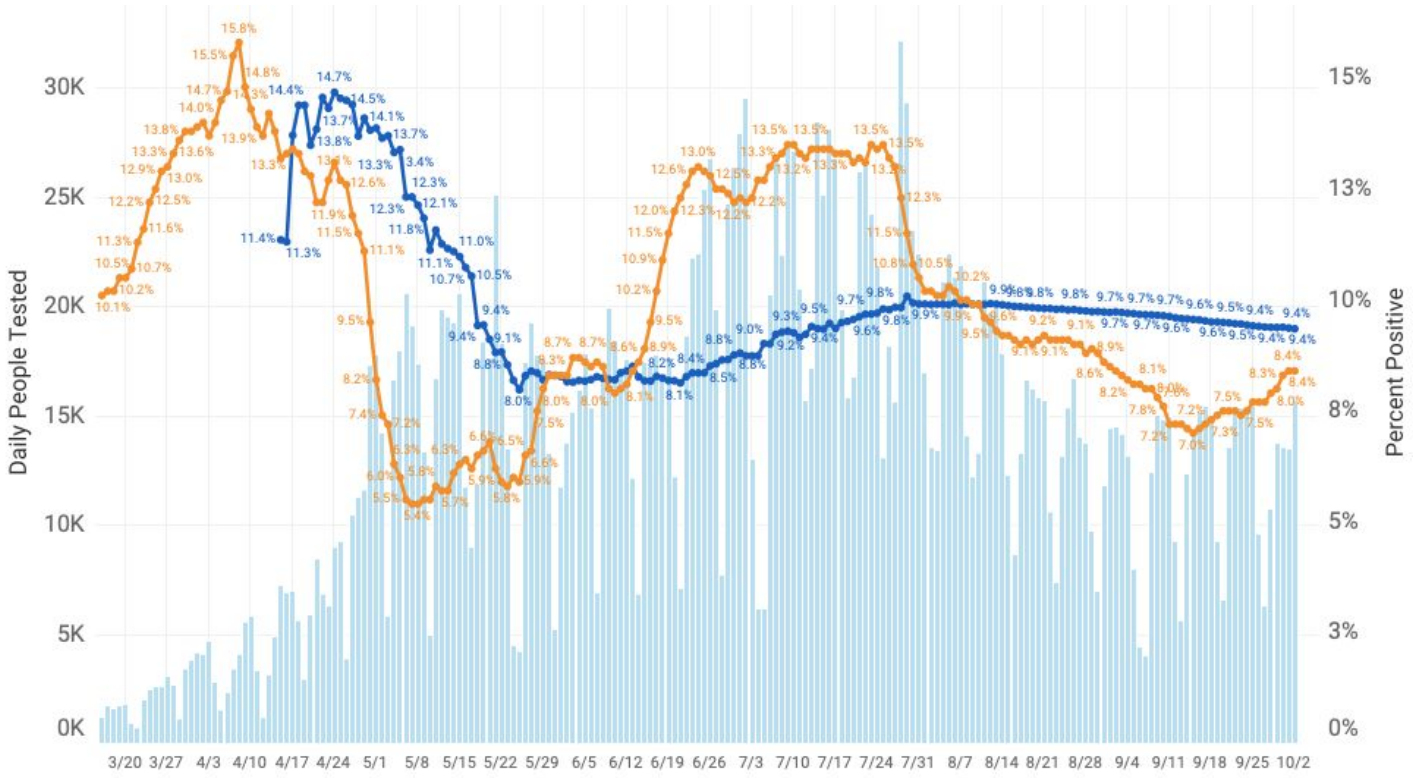
• The overall positive rate for Los Angeles County peaked on 4/8 with a rate of 13.4%

• The positive testing reached its lowest rate of 7.7% on 5/27

• Given delays in testing results, 7-day positive average rates are more stable when viewed after a week.

• The overall cumulative % positive people tested as of 10/2 was 9.4%

• The 7-day average daily % positive persons rate as of 10/2 was 8.4%



Source: Los Angeles County Department of Public Health. Recent dates are incomplete due to lags in reporting.
Persons Tested are derived from Electronic Lab Reporting (ELR) data. Positive Persons will not equal total cases because not all laboratories report results through ELR.
